Dear Participant,

Thank you for your interest in participating in the study. Below you will find information on the study; eligibility criteria; instructions on how to register to participate in the study; and an outline of the study process itself. We anticipate the study will take place during one of the weekends in June.

**SECTION 1: Study Information**

- **What is the goal of the study?** As we face this pandemic and both its human toll, as well as its social and economic impact, safe return to normalcy is dependent on massive-scale antibody testing which can potentially demonstrate immunity to the virus. While tests are becoming available through laboratories, being able to self-test in an “at-home” environment is critical to achieving this mass scale. Our study aims to demonstrate that the results of the antibody test, whether conducted in a laboratory or as a self-test, are consistent.

- **Why test for antibodies?** Antibodies are part of your immune system’s response to infection. They are proteins your body makes and leaves in your blood once infected with a bacterium or virus. The presence of various antibodies in an individual’s blood sample can indicate that their body has been exposed to the COVID-19 virus. COVID-19 antibodies usually appear in your blood around 7-10 days after an infection. PLEASE NOTE THAT an initial result of antibodies does not mean you do not have COVID-19 but having these antibodies may potentially indicate immunity.

**IMPORTANT: THE RESULTS OF THIS STUDY AND THE TESTS CONDUCTED DO NOT CONFIRM IMMUNITY TO COVID-19, AND SHOULD NOT FORM THE BASIS FOR ANY MEDICAL DECISION. PARTICIPANTS SHOULD CONSULT THEIR PHYSICIAN OR OTHER MEDICAL PROFESSIONAL TO INTERPRET THE RESULTS OF THESE TESTS.**

- **Inclusion criteria:** Interested individuals must meet the following three criteria below:
  1. I am not a medical or laboratory professional
  2. I do not conduct any self-tests that require a finger prick test (such as diabetes or other methods of drawing blood)
  3. I am older than 18.

- **Financial considerations:**
  - Participants will bear no financial cost for participating in this study.
  - Participants will receive no financial incentive for participating in this study.
  - Participants must have valid health insurance. Participant’s health insurance will be billed for the cost of the test conducted by the external lab. No copays or deductibles will be charged to you.
  - Precipio receives no financial compensation due to your participation in the study

**SECTION 2: Registration Process**

- If you answer “Correct” to all three inclusion criteria listed above, you may proceed to immediately apply for the study by clicking on the following link: www.precipiodx.com/covidstudy.
- In the application you will be asked to enter some initial information and select a few time slots to come in for the study.
Once you have completed the application and are admitted to the study, you will receive a Participation Form via email with a scheduled time slot.

SECTION 3: Study Process

The study will be conducted at Precipio’s offices at 4 Science Park in New Haven, CT. Specific information will be provided in the participation form.

- Participants arriving for their scheduled time slot must wait in their car, no waiting inside the building. We will send you a text message to enter the building at your allotted time slot.

The following steps will take place upon your arrival:

1. Participant check-in and confirmation – review of the participation form
2. Laboratory test. You will have your blood drawn by a medical professional. The blood will be used for two purposes:
   A. Send out of your blood sample to the FDA-approval laboratory for parallel testing
   B. Tested at Precipio’s laboratory using our patient kit.
3. Self-test step. Individual isolated stations will be set up around the office with a camera to record the self-administered portion of the test. Once you have completed the blood draw, you conduct the “Self-test” portion of the study at your respective station. The purpose of this step is to have you take the test on your own, without any assistance, particularly a medical professional.
4. Upon completion of the Self-test step, you will be able to leave the building.
5. Results of the laboratory tests will be communicated to your physician within 2 weeks of the completion of the study.

Should you have any questions, feel free to contact us at 203.787.1717, or via email at covidstudy@precipiodx.com.
